POWER BI PROJECT

99K orders. One clear problem.

What a Power BI deep dive into Olist, a Brazilian e-commerce marketplace, revealed.

Swipe →

Late orders kill reviews

6.8%

of orders arrived late

2.3★

average review when late

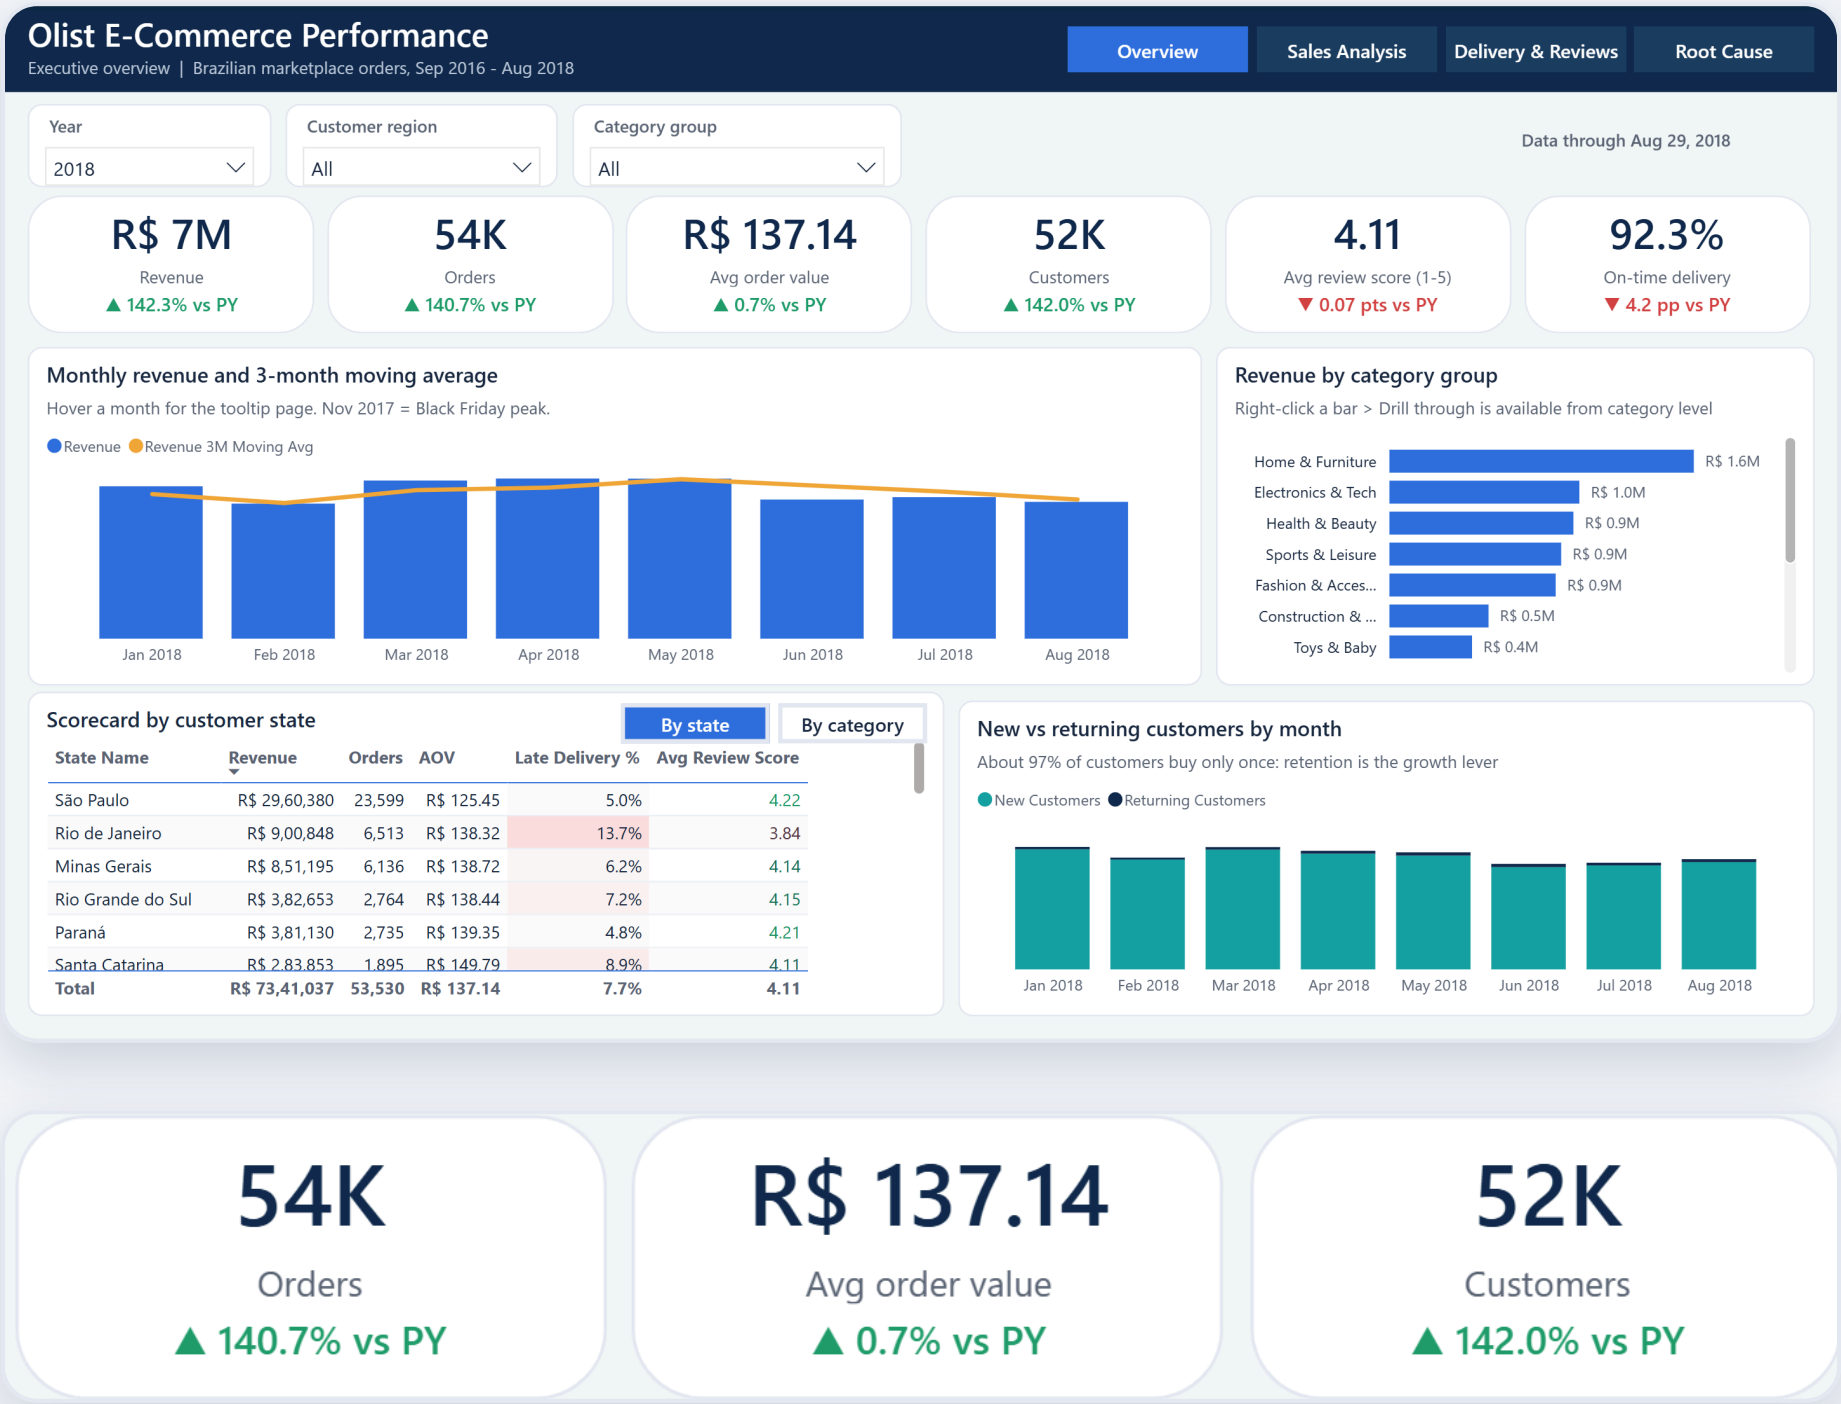

4.3★

average review on time

A small share of orders drives most of the one-star reviews.

The executive view

2018 revenue up **142%** vs the same months of 2017. KPIs, trend and state scorecard on one page.

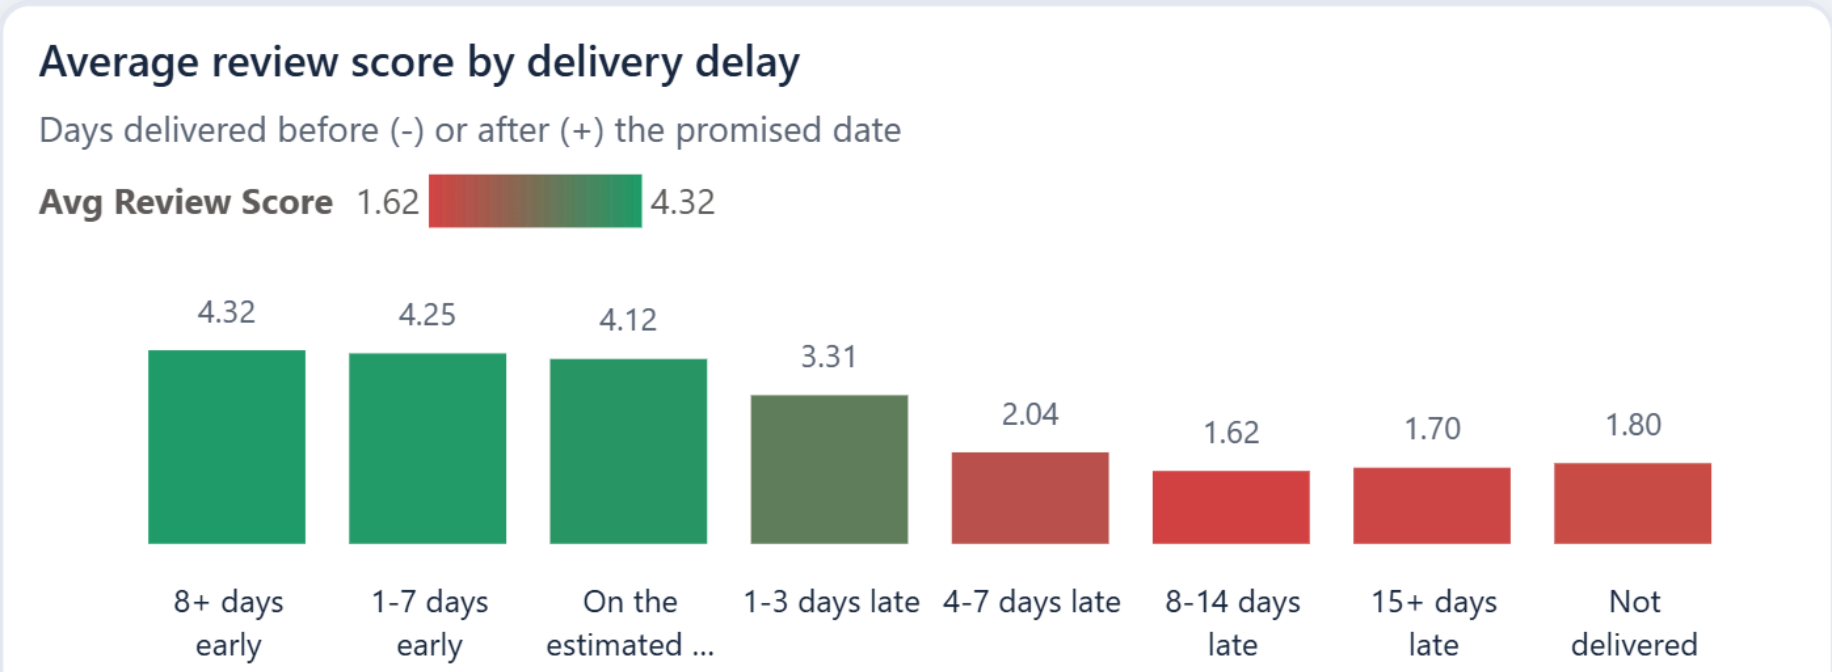

54K

▲ 142.0% vs PY

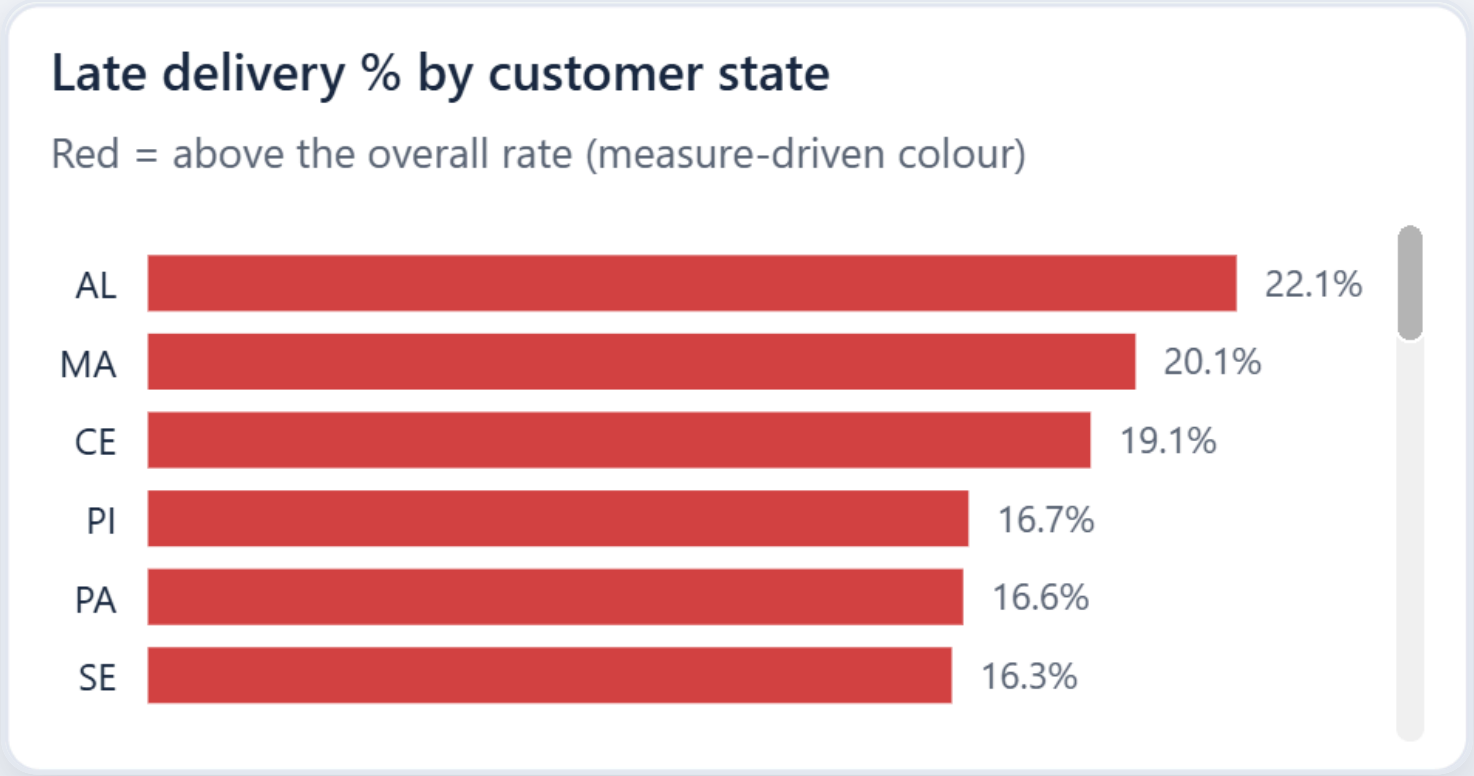

Delay is the review score

Early or on time: **4.1 to 4.3** stars. More than a week late: about **1.7**.

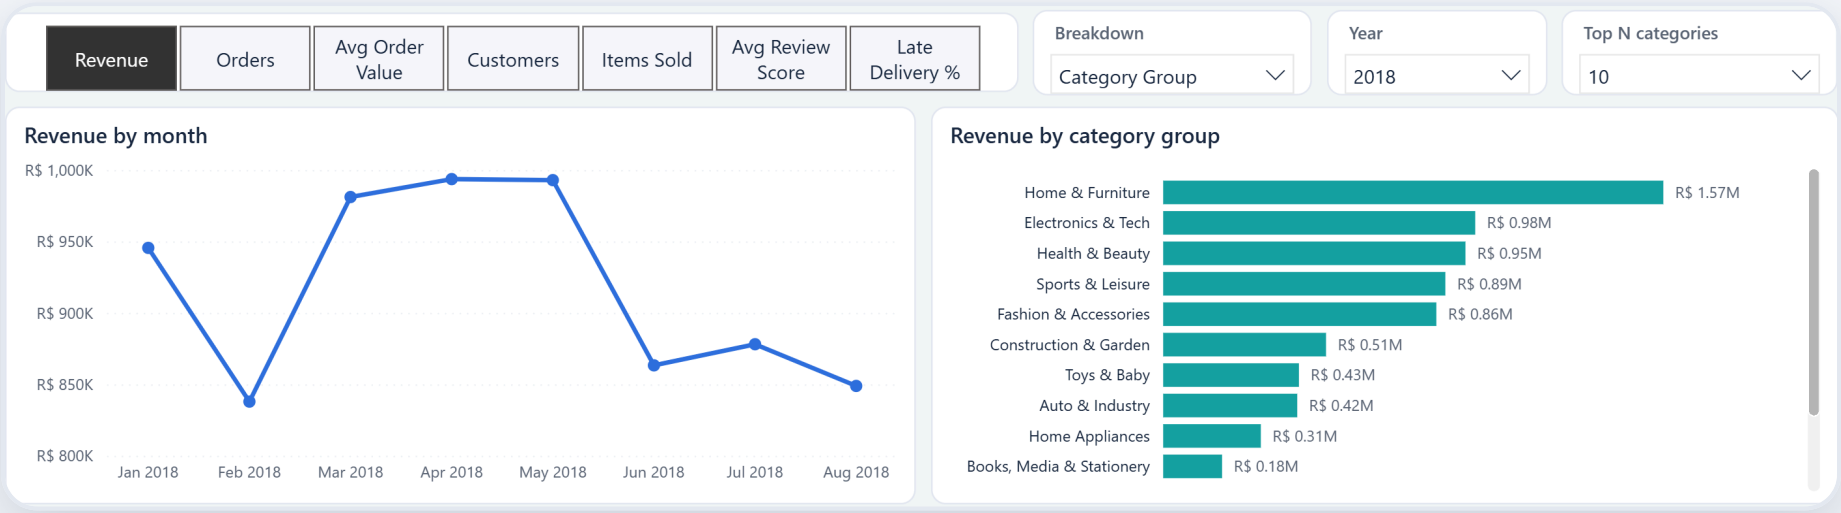

Where it breaks

Alagoas: **21%** late deliveries, about 3x the average. Fix north-east logistics first.

Any metric, any breakdown

Field parameters switch the metric and the axis. A calculation group adds PY, YoY % and YTD to any measure.

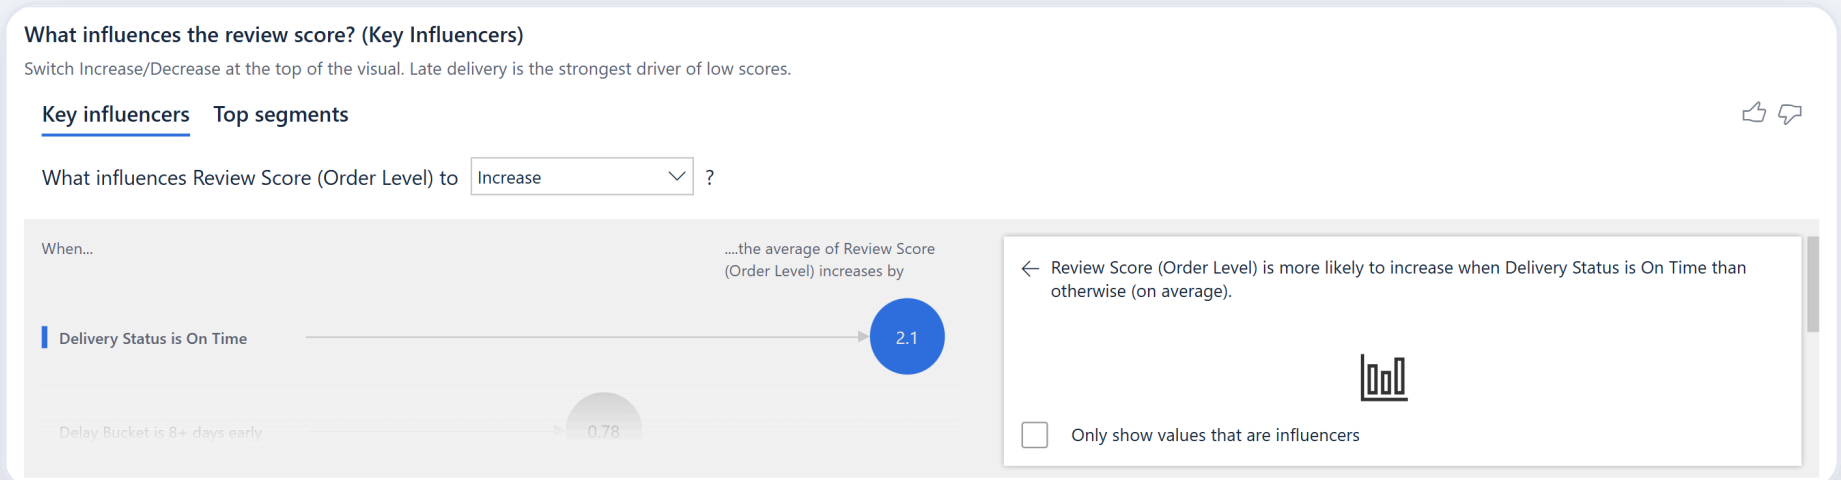

Selected metric by category: Actual, PY, YoY %, YTD (calculation group)

Expand a group to see categories. Right-click a category > Drill through > Category Details

Category Group	Actual	PY	YoY %	YTD
⊞ Auto & Industry	R$ 4,20,557	R$ 1,34,315	+213.1%	R$ 4,20,557
⊞ Books, Media & Stationery	R$ 1,84,691	R$ 55,864	+230.6%	R$ 1,84,691
⊞ Construction & Garden	R$ 5,10,855	R$ 1,63,047	+213.3%	R$ 5,10,855
⊞ Electronics & Tech	R$ 9,78,952	R$ 4,04,569	+142.0%	R$ 9,78,952
⊞ Fashion & Accessories	R$ 8,56,935	R$ 3,10,523	+176.0%	R$ 8,56,935
⊞ Food & Drinks	R$ 45,547	R$ 7,845	+480.6%	R$ 45,547
⊞ Health & Beauty	R$ 9,48,276	R$ 3,66,706	+158.6%	R$ 9,48,276
⊞ Home & Furniture	R$ 15,68,989	R$ 6,97,844	+124.8%	R$ 15,68,989
⊞ Home Appliances	R$ 3,06,227	R$ 1,10,843	+176.4%	R$ 3,06,227
Total	**R$ 73,41,037**	**R$ 30,29,323**	**+142.3%**	**R$ 73,41,037**

AI visuals find the driver

Key Influencers: on-time delivery lifts the review score by **2.1 points**.

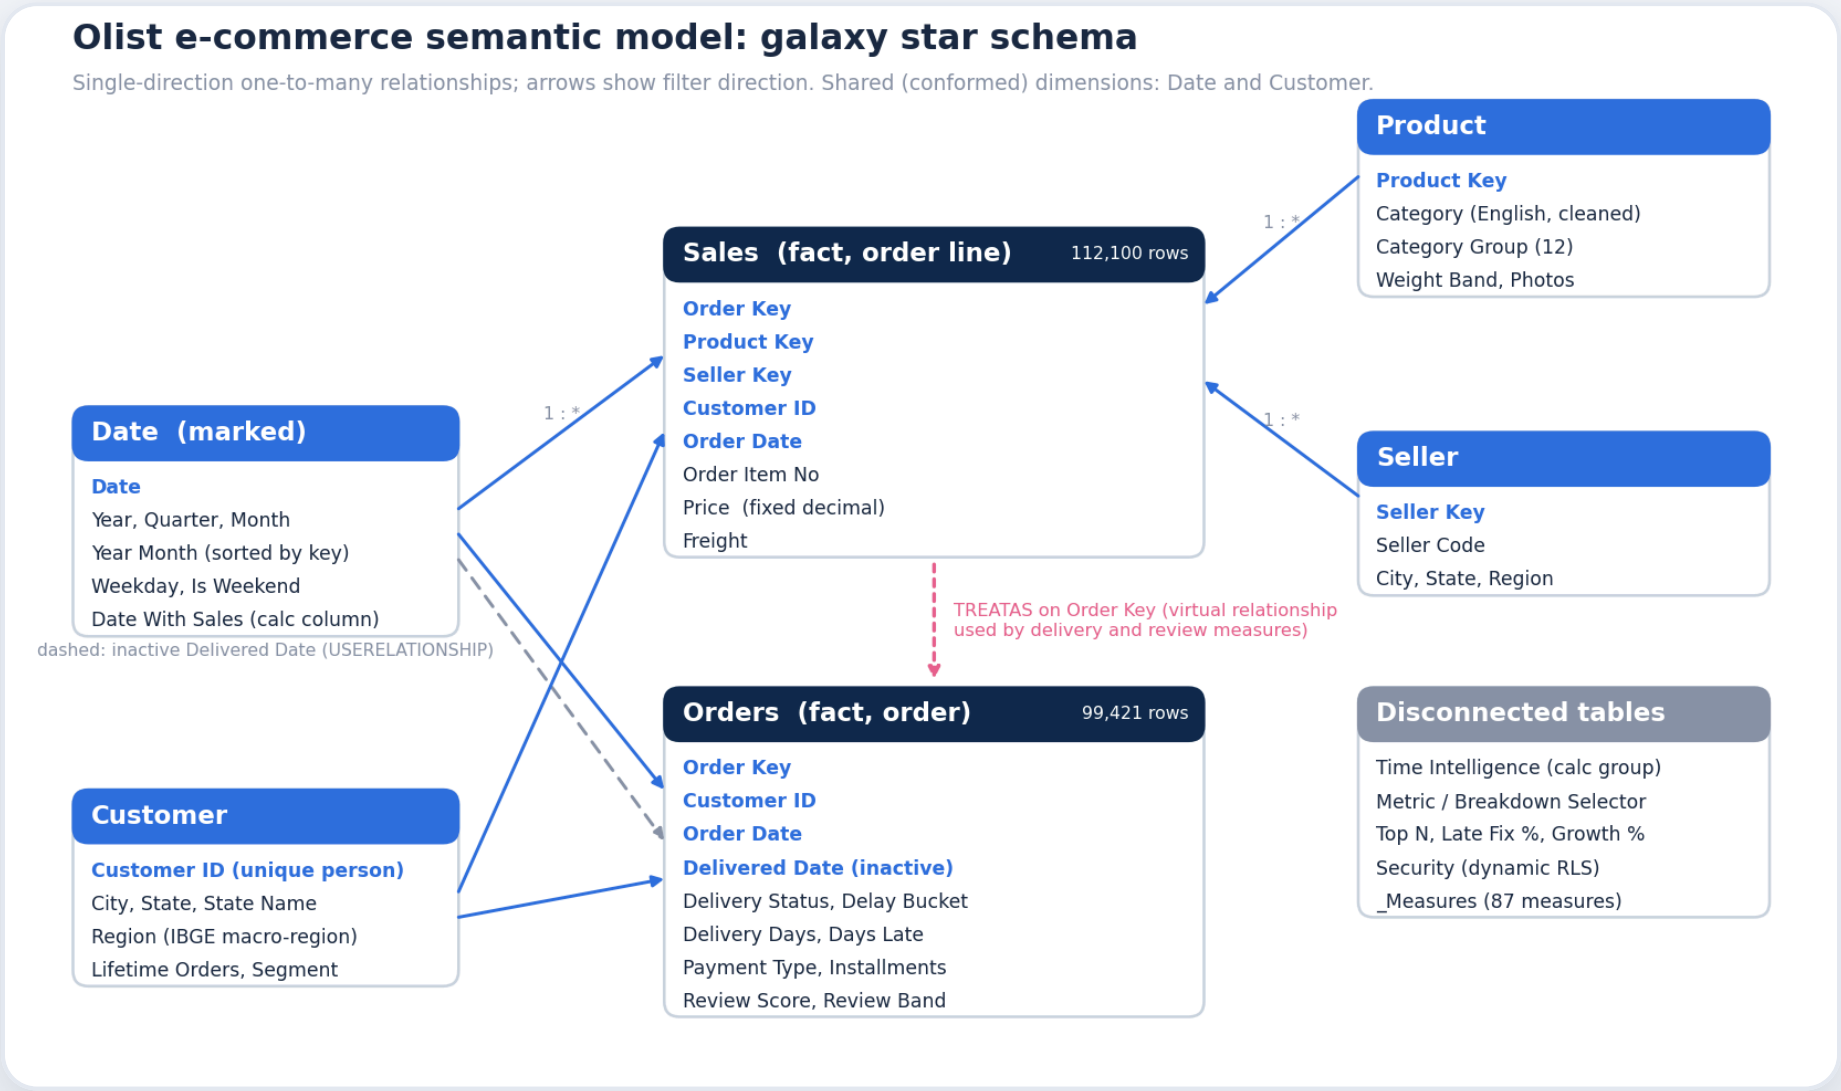

What-if: fixing half the late orders lifts the average review from 4.11 to 4.19.

The model behind it

Star schema, two fact tables at their own grain. TREATAS links order reviews to products and sellers.

Numbers I can defend

✓ **87** DAX measures in display folders
✓ Every KPI matched an independent **Python** check
✓ Refresh cut from **444 s** to **156 s**
✓ Dynamic row-level security, drill-through, bookmarks

```
Revenue PY =
CALCULATE ( [Revenue],
  CALCULATETABLE (
    SAMEPERIODLASTYEAR ( 'Date'[Date] ),
    'Date'[Date With Sales] = TRUE ) )
```

Fair YoY for a partial year: only dates with sales are shifted.

RECAP

What 99K orders said

1. 6.8% of orders were late
2. Late: 2.3★ vs 4.3★ on time
3. 1+ week late: about 1.7★
4. Alagoas: 21% late, 3x average
5. Top 20% of sellers: 82.6% of revenue
6. 97% of customers bought once
